## CytomX Therapeutics to Present at Upcoming November Investor Conferences

November 2, 2022

SOUTH SAN FRANCISCO, Calif., Nov. 02, 2022 (GLOBE NEWSWIRE) -- CytomX Therapeutics, Inc. (Nasdaq: CTMX), a leader in the field of conditionally activated oncology therapeutics, today announced that Sean McCarthy, D.Phil., chief executive officer and chairman, will participate in the following investor conferences in November.

### **BMO Biopharma Spotlight Series: Oncology Day**

Date: Wednesday, November 9, 2022

Fireside Chat: 11:30 a.m. ET

Location: Virtual

### **Piper Sandler 34<sup>th</sup> Annual Healthcare Conference**

Date: Tuesday, November 29, 2022

Fireside Chat: 8:30 a.m. ET

Location: New York, NY

A live webcast of the Piper Sandler fireside chat will be available on the Events and Presentations page of CytomX's website at [www.cytomx.com](http://www.cytomx.com). In addition, management will be available for one-on-one meetings with investors who are registered to attend the conferences.

### **About CytomX Therapeutics**

CytomX is a clinical-stage, oncology-focused biopharmaceutical company dedicated to destroying cancer differently. By pioneering a novel class of conditionally activated biologics, powered by its Probod<sup>®</sup> technology platform, CytomX's goal is to transcend the limits of current cancer treatments. CytomX's robust and differentiated pipeline comprises seven therapeutic candidates across multiple treatment modalities including antibody-drug conjugates ("ADCs"), T-cell engaging bispecific antibodies ("TCBs"), and immune modulators such as cytokines and checkpoint inhibitors ("CPIs"). CX-2029 is an investigational conditionally activated antibody-drug conjugate (ADC) directed toward CD71, which has demonstrated encouraging antitumor activity in patients with squamous non-small cell lung cancer and is being developed in collaboration with AbbVie. CytomX's clinical pipeline also includes cancer immunotherapeutic candidates against validated targets such as the CTLA-4-targeting Probod therapeutics, BMS-986249 and BMS-986288, partnered with Bristol Myers Squibb, as well as CX-904, a conditionally activated T-cell-engaging bispecific antibody targeting the epidermal growth factor receptor (EGFR) on tumor cells and the CD3 receptor on T cells, which is partnered with Amgen. In addition, CytomX has a diverse preclinical portfolio of wholly-owned assets including CX-801, an interferon alpha-2b Probod cytokine that has broad potential applicability in traditionally immuno-oncology sensitive as well as insensitive (cold) tumors and CX-2051, a conditionally activated ADC directed toward EpCAM, with potential applicability across multiple EpCAM-expressing epithelial cancers. Praluzatamab ravtansine is an investigational conditionally activated ADC directed toward CD166 that demonstrated single agent clinical activity in a Phase 2 study for patients with advanced HR+/HER2-non-amplified breast cancer. Following the Phase 2 results, CytomX decided not to further progress praluzatamab ravtansine alone and is seeking a partner to further develop the molecule. CytomX has also established strategic collaborations with multiple leaders in oncology, including AbbVie, Amgen, Astellas, and Bristol Myers Squibb. For more information about CytomX and how it is working to make conditionally activated treatments the new standard-of-care in the fight against cancer, visit [www.cytomx.com](http://www.cytomx.com) and follow us on [LinkedIn](#) and [Twitter](#).
